Exercise 3: Webpage with Tables, Articles, and Navigation

Objective: In this exercise, Group 3 will create a webpage that includes tables, articles, and navigation.

Instructions:

Divide your group into roles: one person will write the HTML code, one will create tables, one will draft articles, and one will design the navigation menu.

Create an HTML file named "webpage.html" using an HTML editor or text editor.

Design a navigation menu for your webpage. Include links to different sections of your page.

Create at least two tables within the content area of your webpage. Populate the tables with data of your choice.

Write two articles on different topics and include them on the page. Use appropriate HTML tags to structure your articles.

Style your webpage using CSS to make it visually appealing. Apply different styles to tables, articles, and the navigation menu.

Ensure your HTML code is well-structured and valid.

Test your webpage in a web browser to ensure all links and content display correctly.

Present your webpage to the other groups, highlighting the use of tables, articles, and navigation.
